Gianni RONDINI

Principal Engineer · Solutions Architect · AI Platform & Developer Experience

📫 gianni.rondini@gmail.com · 🌍 Italian Nationality · 🔗 github.com/giannirondini

PROFESSIONAL SUMMARY

Principal Engineer with 12+ years across backend (*Java, Quarkus, Spring*), frontend (*Angular, TypeScript*), and distributed API architecture. Currently driving **GenAI integration and the internal developer-experience practice** inside a 1,000+ person travel-tech organization · prompt and context engineering, advanced GitHub Copilot and Claude Code customization, custom agents, and MCP server development. Ships product outside the day job: four open-source projects spanning a native macOS Copilot client, MCP tooling, and local-AI pipelines. SAFe-certified Scrum Master who has driven API governance across multi-team organizations. Looking to bring architectural leverage and operational AI practice to a product-driven company.

CORE COMPETENCIES

AI / GenAI Engineering: Prompt engineering · Context engineering · MCP (*Model Context Protocol*) server development · Custom agents · GitHub Copilot advanced customization (*repo-level workflows & instructions*) · Claude Code · Ollama · LM Studio · Local LLM deployment · Developer-experience automation

Languages & Runtimes: Java · TypeScript · JavaScript · Python · SQL · Bash · Swift · Node.js · Groovy · C / C++ · AppleScript

Frameworks: Angular · RxJS · NgRx · Quarkus · Spring · Hibernate

API & Architecture: OpenAPI · API-first design · API Governance · Microservices · Event-driven architecture · Azure API Management · API Gateway · Stoplight

Cloud & Platform: Azure (*Databricks, Functions, CDN, APIM*) · OpenShift · Docker · CouchBase · Oracle DB · WebLogic · JBoss · WebSphere

DevOps & Observability: GitHub Actions · Jenkins · ArgoCD · SonarQube · Splunk · Datadog

Methodology & Leadership: Agile · Scrum (*PSM I*) · SAFe 5 Scrum Master · Technical leadership · Cross-functional collaboration · Mentorship · Product engineering · Developer productivity.

PROFESSIONAL EXPERIENCE

Principal Engineer — AI Platform & Developer Experience

Amadeus · Airline Solutions — Offer Engineering · *Nov 2024 – Present*

Pricing Cockpit — airline offer-price optimization platform.

- Architected and drove **organization-wide GenAI adoption**: established prompt and context engineering standards, rolled out advanced **GitHub Copilot customization** (*repository-level instructions, custom workflows, custom agents*), and piloted **Claude Code** for engineering teams · fostered the adoption of AI tools across six teams, increasing the adoption by 40/50%.
- Developed internal **MCP servers** to connect enterprise tooling with AI assistants, extending agent capabilities beyond out-of-the-box functionality and enabling context-aware automation across workflows.
- Operationalized **local LLM tooling** (*Ollama, LM Studio*) for privacy-sensitive use cases and evaluation workflows, giving engineers production-grade AI options without data-exit concerns.
- Owned end-to-end delivery of the **Pricing Cockpit** — Angular / NgRx / RxJS front-end through Python / OpenAPI back-end on Azure Databricks · including performance tuning that reduced query latency and API response times.
- Established **engineering standards and knowledge-sharing practices** across the organization; authored extensive Confluence documentation · architectural decisions, how-to guides, and tooling playbooks — adopted as reference material across teams.
- Active contributor to internal **API and Agile improvement groups** shaping cross-product engineering practice, and a regular voice in the internal **macOS support community** for fellow engineers.

Stack: Angular · NgRx · RxJS · TypeScript · Python · OpenAPI · Azure Databricks · GitHub · Jenkins · ArgoCD · GitHub Copilot · Claude Code · Ollama · LM Studio · SAFe

Principal Engineer — Component Owner, Guest-Facing APIs

Amadeus · Amadeus Hospitality · *Jan 2024 – Nov 2024*

iHotelier (TravelClick) — hospitality guest experience platform.

- Defined the **technical roadmap and architecture** for Guest Facing Applications; represented GFA on the **HOS API Board**, shaping cross-product API strategy.
- Led the **TravelClick → Amadeus infrastructure migration**, modernizing CI/CD pipelines across multiple teams.
- Designed the **API Gateway integration** for iHotelier and ACRS APIs, enabling unified access patterns across the hospitality suite.
- Stood up production **observability** (*Splunk, Datadog*) and drove cross-product API performance analysis initiatives.

Stack: OpenAPI · API Governance · Java · Quarkus · Docker · Jenkins · Splunk · Datadog · Ollama · SAFe

Senior Engineer — Cytric Expert & API Governance Lead

Amadeus · Cytric Solutions · *Sep 2021 – Dec 2023*

Cytric Easy — corporate travel platform used by enterprise customers globally.

- **API Governance (org-wide initiative):** Led the standardization of **API-first design practices across Cytric teams** — evaluated and adopted Stoplight as the org-wide tool, trained teams on its usage, and authored governance playbooks and tooling documentation in Confluence that became reference material for new engineers joining the program.
- **Cytric monolith API integration strategy:** Identified the integration gap in the Cytric monolith and quickly delivered a working base architecture that teams could build on top of — transforming API integration from a per-team effort into a shared platform pattern that scaled across the product.
- Designed and built **Azure API Management CI/CD pipelines**, unblocking API deployment velocity for multiple teams working on the monolith.
- Delivered targeted performance wins: **Azure CDN** for image delivery and **Azure Functions** for data synchronization flows.
- Integrated **CouchBase** for system sync, deployed the **Azure API Portal Manager**, and contributed to broader microservice architecture evolution.
- Mentored junior developers and supported Agile practices across the organization.

Stack: OpenAPI · API Governance · Java · Quarkus · OpenShift · CouchBase · Docker · Azure (APIM, CDN, Functions) · GitHub · Ollama · SAFe

Senior Software Engineer & Scrum Master (Contractor for Amadeus IT Solutions)

Alten · *Sep 2016 – May 2019*

Continuous assignment at Amadeus across four successive Cytric initiatives.

- **NDC API integration for Cytric (2018–2021) —** Led technical strategy and delivery of the New Distribution Capability integration: transformation, routing, and error-handling components; built Dockerized WebLogic QA infrastructure with Jenkins; documented Oracle DB duplication procedures for test environments. Served as **Scrum Master** driving Agile discipline across the team.
- **Cytric Expense (Angular app) (2017–2018) —** Developed a new Angular application that simplified expense-claim submission for corporate travelers; integrated authentication, validation, and reporting flows over OpenAPI contracts.
- **Cytric UI modernization & core development (2017) —** Delivered a full UX-led UI redesign; contributed platform features, code reviews, and mentorship on the Cytric core team.
- **CPS (Cytric Profile Synch) migration (2016–2017) —** Built user-provisioning tooling for the AeTM → Cytric corporate-user migration, ensuring continuity of service during the cutover.

Stack: Java · Angular · TypeScript · JavaScript · Oracle · WebLogic · Docker · Jenkins · SonarQube · Git · OpenAPI · Scrum · SAFe

Senior Software Engineer & Analyst
Accenture · *Oct 2012 – Aug 2016*

- **Ministry of Health & AIFA (Italian public sector):** Delivered multiple full-stack web applications using Java, Spring, Hibernate, and PL/SQL on WebSphere/JBoss; built operational reporting with Jasper/iReport.
- **ASL CN1 Savigliano — CAMS platform modernization:** Led the migration of the hospital's Central Appointment Management System from Digital Unix to CentOS, including full-stack modernization across C++, Java, WebSocket, Oracle, and JBoss.

Stack: Java · Spring · Hibernate · JavaScript · jQuery · HTML5 · Bootstrap · Oracle · PL/SQL · C++ · Bash · WebSocket · WebSphere · JBoss

SELECTED OPEN SOURCE & SIDE PROJECTS

Personal projects built to explore AI tooling, developer experience, and product-shaped thinking. Full source and history at github.com/giannirondini.

- **anchor** · *Swift · macOS · NodeJS · GitHub Copilot SDK* — Native macOS chat client for GitHub Copilot, delivering a ChatGPT-style experience powered directly by the Copilot SDK.
- **mockoon-mcp** · *TypeScript · Model Context Protocol · Mockoon · OpenAPI* — MCP server for Mockoon configurations; enables AI assistants to read, modify, and manage routes, responses, environments, and data buckets programmatically. Extends agentic AI into API mocking workflows.
- **local-whisper** · *Python · Whisper · Ollama* — Privacy-focused, fully offline voice-to-text tool for macOS: hotkey-triggered audio capture, Whisper transcription, Ollama-based refinement. 100% local inference, no cloud dependencies.
- **yoga-home** · *JavaScript · HTML · CSS* — Static web app for guided yoga, tai-chi, and cardio sessions, designed for users aged 60+ (*Italian UI*). Deliberately backend-free and subscription-free — a study in minimal, accessible delivery.

Also: personal macOS automation toolkit (AppleScript / Bash) for developer-environment bootstrapping, Jira ticket lookup, and start-of-day / end-of-day workstation routines.

EDUCATION

- **Master of Science in Informatics Engineering** — Communications Networks major · Politecnico di Torino, 2010–2011 · 90/110
- **Bachelor of Science in Informatics Engineering** · Politecnico di Torino, 2007–2008 · 90/110

CERTIFICATIONS

- **Certified SAFe 5 Scrum Master** (2021)
- **Professional Scrum Master I** — Scrum.org (2019)
- **Advanced Java Developer** (2012)
